DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Choy (EP 1301491) in view of Leenders et al (USPN 5,568,173).

With respect to claims 1-19, Choy discloses an apparatus and a method of enhancing color space comprising:

- A pen set configured to depositing dye based ink and fixer on a print medium in a print zone ([0028], [0025])
- The depositing dye based ink and fixer further comprises underprinting the fixer on the print medium and then depositing the dye based in n the print medium (Fig.2)
- A pen set is configured to depositing a layer of the fixer over the deposited dye based ink ([0028])
- Print medium comprises plain paper ([0025])
- Applying heat to the print zone after the depositing dye based ink ([0029])
- Applying heat to the print zone prior to the depositing dye based ink and fixer ([0029])

- The depositing is effected by one pass print mode, two pass mode ([0028])

However, Choy fails to teach the temperature is between about 45 and 85 or 45 and 55 degrees.

Leenders et al teaches the temperature is between about 45 and 85 or 45 and 55 degrees (Column 11: line 5-8).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to heat at the temperature as taught by Leenders. The motivation of doing is to obtain a desired optical density increase.

Response to Arguments

2. Applicant's arguments filed 4/7/06 have been fully considered but they are not persuasive.

Applicant argues that Leenders et al teaches away from Choy and, therefore, provides no motivation to be combined with Choy. In fact, Leenders teaches away from such a solution by providing an entirely different solution to a different problem. This argument is not deemed to be persuasive because since Choy teaches the claimed invention accepted for the specific range of temperature, so the Examiner only relies on Leenders for the range of the temperature, not for other feature such as solution. Therefore, the combination of Choy and Leenders still meets the claimed invention.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
